

TE TapeEcho MkII

Thank you for choosing TE TapeEcho!

TE TapeEcho Mk2 is a tape style echo with built in Chorus and Reverb created with inspiration from vintage echo machines of yesteryears.

The echo has three time divisions from short (1) to long (3). Use the slider control to seamlessly slide the playhead for precise timing or timeshifting special effects. With the slider to the leftmost position it will delayrate is divided by four, and in in the rightmost position it is multiplied by two. Use the Time Chart on the back panel as reference for delay times.

Since TE is a stereo device it allows for spacious effects. The stereo switch, the built-in chorus and spring reverb allows you to create wide atmospheric sounds.

The Direct switch let you use the echo either as an insert or as a send effect. In Direct mode Feedback, Chorus intensity and Reverb amount knobs work like wetness controls. On the backside you will find several trimmers and a switch for sequencer sync. Finely tune the stereo echo effect with the width and offset trimmers and adjust the character with tape and motor age trimmers.

SPECIFICATIONS:

- In and output level control
- Slider function
- Tonality Control
- Saturation
- Direct Mode
- Chorus
- Reverb
- Vintage vibes
